OBJECTIVE

AI/ML and Data Science enthusiast with hands-on experience in NLP, deep learning, and data-driven application development through internships and industry projects. Skilled in Python, SQL, TensorFlow, Keras, and scikit-learn, with experience building Text-to-SQL pipelines, call analysis systems, and NLP workflows. Holds a degree in Electronics and Communication Engineering and is seeking a full-time role as an AI/ML Engineer or Data Scientist to build scalable, production-ready AI solutions.

EDUCATION

Bachelor of Engineering in Electronics and Communication

Jawaharlal Nehru National College Of Engineering, Shivamogga, Karnataka

CGPA: 9.31

2021 – 2025

Skills

- **Programming Languages:** Python, SQL, Object-Oriented Programming (OOP)
- **Machine Learning & Deep Learning:** scikit-learn, TensorFlow, Keras, Convolutional Neural Networks (CNN), Supervised Learning, Unsupervised Learning, Transfer Learning
- **Natural Language Processing (NLP):** NLTK, Text Preprocessing (Tokenization, Lemmatization, Stemming), TF-IDF, Word2Vec, POS Tagging, Retrieval-Augmented Generation (RAG), Prompt Engineering
- **Data Analytics & Visualization:** NumPy, Pandas, Matplotlib, Seaborn
- **Databases:** MySQL (DDL, DML, Joins, Subqueries)
- **Tools & Technologies:** Jupyter Notebook, PyCharm, Docker, n8n

EXPERIENCE

AI Intern

Duroflex Pvt Ltd, Bengaluru — Jan 2026 – Present

- Developing AI-driven solutions including call analysis systems, sales forecasting models, and Text-to-SQL modules to deliver actionable business insights and intelligent analytics.
- Building AI Call Analyzer workflows using speech-to-text and NLP techniques to extract insights from customer service interactions and improve decision-making.
- Designing and automating end-to-end AI workflows using n8n, integrating multiple services to streamline data processing and natural language analytics pipelines.

AI Intern

NKB Playtech Pvt Ltd, Bengaluru — Oct 2025 – Jan 2026

- Developed an AI pipeline using SAM3 for component detection and extraction from casino video frames, reducing manual annotation effort by ~40%.
- Experimented with 5+ deep learning pretrained models for component generation and swapping, improving generation accuracy by 15%.
- Streamlined AI research workflows, accelerating model iteration cycles and enabling scalable component generation across video datasets.

PROJECTS

AI Casino

- Built an AI pipeline using SAM3 for accurate component detection and extraction from casino video frames, processing 1000+ frames.
- Experimented with 5+ deep learning pretrained models to generate, modify, and swap visual components, improving output quality iteratively.
- Developed research-driven workflows to automate processes and enable scalable AI-based component generation.

Deep Learning Image Classification — NIKE vs ADIDAS Logo Detection

GitHub

- Implemented a CNN-based image classification model to distinguish between NIKE and ADIDAS logos with 92%+ validation accuracy.
- Completed end-to-end pipeline: data preprocessing, model design, training, evaluation, and augmentation to improve generalization.
- Demonstrated proficiency in deep learning (CNN), transfer learning, and model evaluation techniques.

Duplicate Question Pairs Detection (NLP)

GitHub

- Built an NLP model to detect duplicate question pairs using text preprocessing, TF-IDF, and Word2Vec feature extraction.
- Trained and evaluated ensemble algorithms (Random Forest, XGBoost); Random Forest achieved the highest F1-score of 0.83.
- Applied feature engineering and similarity-based classification to improve performance on unstructured text data.

CERTIFICATIONS & ACHIEVEMENTS
